

FLIPKART SALES DASHBOARD

Power BI Project Documentation

Prepared by: Akash Kumar Singh

File: Flipkart_Sales_Dashboard.pbix

Tool: Microsoft Power BI Desktop

Report Pages: 7

1. Project Overview

The Flipkart Sales Dashboard is an interactive Power BI report built to analyse the e-commerce sales, order, product and customer data of Flipkart. It consolidates transactional data into a single, filterable dashboard that spans 7 report pages, giving stakeholders a 360-degree view of business performance — from top-line sales KPIs to product profitability and customer demographics.

The report follows a standard star-schema data model with one central fact table and multiple supporting dimension tables, along with a dedicated measures table holding all DAX calculations.

2. Objective

- Track overall sales, orders, revenue and profit performance over time.
- Analyse performance by product, category and sub-category.
- Understand order fulfilment — status, delivery type and volume trends.
- Profile customers by zone, age group, gender and location.
- Enable self-service, filterable exploration for business users via slicers and page navigation.

3. Tools & Technology Used

- Microsoft Power BI Desktop — report authoring and visualisation.
- Power Query — data extraction, cleaning and transformation.
- Data Modelling — star schema with Fact and Dimension tables.
- DAX (Data Analysis Expressions) — measures for KPIs and dynamic calculations.

4. Data Model / Schema

The model is built as a star schema — a central fact table (Fact-Ecommerce) connected to multiple dimension tables, with a separate Measure table used to organise all DAX measures.

Table Name	Type	Key Fields / Description
Fact-Ecommerce	Fact Table	Central transactional table — Order Status, Rating, and other transaction-level metrics. Linked to every dimension table.
Dim-order	Dimension	Order details — Order Date, Delivery Type. Used for date-based and delivery-type analysis.
Dim-Calender	Dimension	Date/Calendar table — Year, Month, Weektype, Date Hierarchy (Day/Month/Quarter/Year), Date Range Text. Enables time-intelligence.
Dim-Product	Dimension	Product master — Product name, used for product-level sales and profit analysis.
Dim-Category	Dimension	Product Category master — used for category-wise breakdowns.
Dim-Subcategory	Dimension	Product Sub-Category master — used for sub-category-wise breakdowns.
Dim-Customer	Dimension	Customer master — Zone, Age Group, Gender, Location, used for demographic and geographic analysis.
Measure	Measures Table	A dedicated (disconnected) table holding all DAX measures used across the report for clean organisation.

Relationships: Fact-Ecommerce sits at the centre of the model and relates to Dim-Product, Dim-Category, Dim-Subcategory, Dim-Customer, Dim-order and Dim-Calender, following one-to-many relationships typical of a star schema. Dim-Calender acts as the shared date table enabling time-intelligence (Year/Month/Quarter/Day) across all report pages.

5. Key Measures (DAX)

The following measures, stored in the dedicated Measure table, power the KPI cards and visuals across the report:

Measure	Purpose
Total Sales	Sum of overall sales value; the primary KPI shown on the Overview and Sales pages.
Total Order	Total count of orders placed.
Total Customer	Total count of unique customers.
Average Rating	Average customer rating across transactions.
Total Quantity	Total units/quantity sold.
Average Order Value	Total Sales divided by Total Orders (AOV).
Best Zone	Identifies the top-performing sales zone (dynamic text/label measure).
Best Category	Identifies the top-performing product category (dynamic text/label measure).
Total Products	Total count of distinct products.
Total Products sold	Total number of product units sold, used in the Product page trend.
Total Revenue	Revenue measure used for sub-category treemap and category pie chart.
Total Profit	Profit measure, used to rank top 3 profitable products (tooltip page).
Revenue per customer	Average revenue generated per customer, trended by date and gender.
Data Refreshed On	Displays the last data refresh date/time for report freshness.

6. Report Pages — Detailed Walkthrough

The report contains 7 pages, each focused on a specific analytical area:

6.1 Cover Page

The landing page of the report, used for branding and navigation.

Key Visuals:

- Flipkart logo and title text
- Navigation buttons to jump to other pages
- Decorative shapes / background image

Filters / Interactivity: Year slicer available for global filtering from the first page itself.

6.2 Overview

An executive-summary page giving a quick, at-a-glance snapshot of overall business performance.

Key Visuals:

- KPI Cards: Total Sales, Total Order, Total Customer, Average Rating, Total Quantity, Average Order Value
- Line Chart: Sales trend over Order Date
- Column Chart: Total Sales by Product Category
- Donut Chart: Sales distribution by Customer Zone
- Clustered Bar Chart: Top 5 Products by Sales
- Donut Chart: Order distribution by Order Status
- Card: 'Data Refreshed On' indicator for report freshness

Filters / Interactivity: Year slicer for filtering the whole page.

6.3 Sales

A deep-dive page focused purely on sales performance and trends.

Key Visuals:

- KPI Cards: Total Sales, Last Year Sales, Best Zone, Best Category
- Line Chart: Monthly sales trend
- Column Chart: Sales by Product Category
- Bar Chart: Sales by Zone
- Bar Chart: Sales by Sub-Category

Filters / Interactivity: Year slicer(s) for period-wise comparison.

6.4 Orders

Focuses on order volumes and how orders are distributed across customer segments and fulfilment types.

Key Visuals:

- KPI Card: Total Orders
- Donut Chart: Orders by Customer Age Group
- Donut Chart: Orders by Order Status
- Donut Chart: Orders by Customer Gender
- Donut Chart: Orders by Delivery Type

Filters / Interactivity: Year slicer(s) for order-trend filtering.

6.5 Product

Analyses product-level performance — what's selling, which categories generate the most revenue, and sales trends over time.

Key Visuals:

- KPI Card: Total Product
- Pie Chart: Products sold by Weektype (weekday vs weekend)
- Pie Chart: Revenue share by Product Category
- Area Chart: Products-sold trend with drill-down (Day / Month / Quarter / Year)
- Treemap: Revenue by Sub-Category

Filters / Interactivity: Year slicer(s); drill-through to the hidden Product Tooltip page on hover.

6.6 Customer

Provides a demographic and behavioural view of the customer base.

Key Visuals:

- KPI Cards: Total Customer, Count of Rating
- Funnel Chart: Customers by Location
- Area Chart: Revenue per Customer trend, split by Gender, with date drill-down (Day/Month/Quarter/Year)
- Slicers: Age Group, Rating

Filters / Interactivity: Year, Age Group and Rating slicers for granular customer segmentation.

6.7 Product Tooltip (hidden helper page)

A hidden tooltip page that appears when hovering over product-related visuals, surfacing extra profitability detail without cluttering the main pages.

Key Visuals:

- Multi-row Card: Top 3 most profitable products, ranked by Total Profit

Filters / Interactivity: Not directly navigated to — triggered as a tooltip from the Product page visuals.

7. Interactivity Features

- Global and page-level Year slicers for period-based filtering.
- Age Group and Rating slicers on the Customer page for demographic segmentation.
- Custom navigation buttons on every page for quick movement between pages.
- A hidden Tooltip page (Product Tooltip) that surfaces extra detail on hover.
- Cross-filtering: selecting a value in any chart filters all other visuals on the same page.
- Drill-down date hierarchies (Day → Month → Quarter → Year) on trend charts.

8. Key Business Insights Enabled

- Overall sales, order and revenue trend over time.
- Best-performing zone and product category at a glance.
- Category and sub-category level revenue contribution.
- Order fulfilment breakdown by status and delivery type.
- Customer distribution by zone, age group, gender and location.
- Top 3 most profitable products for targeted business focus.
- Weekday vs. weekend product sales pattern.

9. Conclusion

The Flipkart Sales Dashboard brings together sales, order, product and customer data into a single, well-structured Power BI report built on a clean star-schema model. With 7 dedicated pages, 15 DAX measures and multiple

layers of slicers, drill-downs and tooltips, it enables business users to move from a high-level overview to granular, segment-level insight — supporting faster, data-driven decision-making across the Flipkart e-commerce business.
